[पेटेंट कार्यालय द्वारा जारी की गई पेटेंटों और डिजाइनों से सम्बन्धित अधिसूचनाएं और नोटिस]

[Notifications and Notices Issued by the Patent Office relating to Patents and Designs]

THE PATENT OFFICE  
PATENTS AND DESIGNS

Kolkata, the 11th September 2004

#### ADDRESSES AND JURISDICTION OF THE OFFICES OF THE PATENTS OFFICE

The Patent Office has its Head Office at Kolkata and Branch Offices at Mumbai, Delhi and Chennai having Territorial Jurisdiction on a Zonal basis as shown below:—

1. Patent Office Branch,  
Todi Estates, IIIrd Floor,  
Sun Mill Compound,  
Lower Parel (West),  
Mumbai-400 013.

The States of Gujarat,  
Maharashtra, Madhya Pradesh  
and Goa and the Union  
Territories of Daman and  
Diu & Dadra and Nagar Haveli.

Telegraphic Address "PATOFFICE"  
Phone Nos. (022) 2492 4058, 2496 1370, 2492 3684,  
2490 3852  
Fax Nos. (022) 2495 0622, 2490 3852  
E-mail: patnum@vsnl.net

2. Patent Office Branch,  
W-5, West Patel Nagar,  
New Delhi-110 008.

The States of Haryana,  
Himachal Pradesh,  
Jammu and Kashmir,  
Punjab, Rajasthan,  
Uttar Pradesh and Delhi and the  
Union Territory of Chandigarh.

Telegraphic Address "PATENTOFIC"  
Phone Nos. (011) 2587 1255, 2587 1256,  
2587 1257, 2587 1258.  
Fax No. (011) 2587 1256.  
E-mail: delhipatent@vsnl.net

3. Patent Office Branch,  
Guna Complex, 6th Floor, Annex-II,  
443, Annasalai, Teynampet,  
Chennai-600 018.

The States of Andhra Pradesh,  
Karnataka, Kerala, Tamil Nadu and  
Pondicherry and the Union  
Territories of Laccadive, Minicoy and  
Aminidivi Islands.

Telegraphic Address "PATENTOFFIC"  
Phone Nos. (044) 2431 4324/4325/4326.  
Fax Nos. (044) 2431 4750/4751.  
E-mail. patentchennai@vsnl.net

4. Patent Office (Head Office),  
Nizam Palace, 2nd M.S.O. Building,  
5th, 6th & 7th Floor,  
234/4, Acharya Jagadish Bose Road,  
Kolkata-700 020.

Rest of India

Telegraphic Address "PATENTS"  
Phone Nos. (033) 2247 4401/4402/4403.

Fax Nos. (033) 2247 3851, 2240 1353.

E-mail. patentin@vsnl.com  
patindia@giascl01.vsnl.net.in

Website : http://www.Ipindia.nic.in

All applications, notices, statements or other documents or any fees required by the Patents Act, 1970 and the Patents (Amendment) Act, 2002 or by The Patents Rules, 2003 will be received only at the appropriate offices of the Patent Office.

Fees : The fees may either be paid in cash or may be sent by Bank Draft or Cheques payable to the Controller of Patents drawn on a scheduled Bank at the place where the appropriate office situated.

### पेटेंट कार्यालय

एकस्व तथा अधिकल्प

कोलकाता, दिनांक 11 सितम्बर 2004

पेटेंट कार्यालय के कार्यालयों के पते एवं क्षेत्राधिकार

पेटेंट कार्यालय का प्रधान कार्यालय कोलकाता में अवस्थित है तथा मुम्बई, दिल्ली एवं चेन्नई में इसके शाखा कार्यालय हैं, जिनके प्रादेशिक क्षेत्राधिकार जोन के आधार पर निम्न रूप में प्रदर्शित हैं:--

1. पेटेंट कार्यालय शाखा,  
टोडी इस्टेट, तीसरा तल,  
सन मिल कम्पाउंड,  
लोअर परेल (वेस्ट),  
मुम्बई - 400 013।

गुजरात, महाराष्ट्र तथा मध्य प्रदेश  
तथा गोआ राज्य क्षेत्र एवं  
संघ शासित क्षेत्र, दमन तथा दीव एवं  
दादर और नगर हवेली।

तार पता : "पेटेंटोफिस"

फोन : (022) 2492 4058, 2496 1370, 2490 3684, 2490 3852

फैक्स : (022) 2495 0622, 2490 3852

ई. मेल : patmum@vsnl.net

2. पेटेंट कार्यालय शाखा,  
इब्ल्यू-5, वेस्ट पटेल नगर,  
नई दिल्ली - 110 003।

हरियाणा, हिमाचल प्रदेश, जम्मू  
तथा कश्मीर, पंजाब, राजस्थान,  
उत्तर प्रदेश तथा दिल्ली राज्य  
क्षेत्रों एवं संघ शासित क्षेत्र चंडीगढ़।

तार पता : "पेटेंटोफिस"

फोन : (011) 2587 1255, 2587 1256, 2587 1257,

2586 1258.

फैक्स : (011) 2587 1256.

ई. मेल : delhipatent@vsnl.net

3. पेटेंट कार्यालय शाखा,  
गुणा कम्प्लेक्स, छठा तल, एनेक्स-II,  
443, अन्नासलाई, तेनामपेट,  
चेन्नई - 600 018।

आन्ध्र प्रदेश, कर्नाटक, केरल, तमिलनाडु  
तथा पाण्डिचेरी राज्य क्षेत्र एवं संघ  
शासित क्षेत्र लक्षद्वीप, मिनीकाय तथा एमिनिदिव द्वीप।  
तार पता - "पेटेंटोफिस"

फोन : (044) 2431 4324/4325/4326.

फैक्स : (044) 2431 4750/4751.

ई. मेल : patentchennai@vsnl.net

4. पेटेंट कार्यालय (प्रधान कार्यालय),  
निजाम पैलेस, द्वितीय बहुतलीय कार्यालय  
भवन, 5वां, 6वां व 7वां तल,  
234/4, आचार्य जगदीश बोस मार्ग,  
कोलकाता - 700 020।

भारत का अवशेष क्षेत्र।

तार पता - "पेटेंट्स"

फोन : (033) 2247 4401/4402/4403.

फैक्स : (033) 2247 3851, 2240 1353.

ई. मेल : patentin@vsnl.com

patindia@giascl01.vsnl.net.in

वेब साइट : http://www.Ipindia.nic.in

पेटेंट अधिनियम, 1970 तथा पेटेंट (संशोधन) अधिनियम, 2002 अथवा पेटेंट नियम, 2003 द्वारा अपेक्षित सभी आवेदन, सूचनाएं, विवरण या अन्य दस्तावेज या कोई फीस पेटेंट कार्यालय के केवल समुचित कार्यालय में ही ग्रहण किए जाएंगे।

शुल्क : शुल्कों की अदायगी या तो नकद की जाएगी अथवा जहां उपयुक्त कार्यालय अवस्थित है, उस स्थान के अनुसूचित बैंक से नियंत्रक, पेटेंट को भुगतान योग्य बैंक ड्राफ्ट अथवा चैक द्वारा की जा सकती है।

## Application for the patent filed at The Patent Office, Kolkata.

04/08/2004

New Application No	Applicant Details
462/KOL/2004	ARNAB BANERJEE ; West Bengal, India; "PORTABLE MICRO PROJECTOR AND MICROSCOPE."
463/KOL/2004	INDIAN INSTITUTE OF TECHNOLOGY , ; West Bengal, India; "SYSTEM FOR AN INTUITIVE, CUSTOMIZABLE, MULTILINGUAL AND RECONFIGURE ABLE AUGMENTATIVE COMMUNICATION."
464/KOL/2004	MASCHINENFABRIK GUSTAV EIRICH GMBH & CO. KG. ; , 22/08/2003, Europe; "AGITATOR MILL"
465/KOL/2004	WYETH HOLDINGS CORPORATION.; , 10/11/2000. 18/10/2001. , United States of America; "A PROCESS FOR THE MANUFACTURE OF ANTIGENIC COMPOSITION."

05/08/2004

New Application No	Applicant Details
466/KOL/2004	THE TATA IRON AND STEEL COMPANY LIMITED.; Jharkhand, India; "RECOVERY OF UNBURBND CARBON FROM FLY ASH BY FROTH FLOTATION."
467/KOL/2004	THE TATA IRON AND STEEL COMPANY LIMITED.; Jharkhand, India; "A METHOD FOR PRODUCING FORMABLE COLD ROLLED STEEL SHEETS WITH LOW PLANAR ANISOTROPY."

06/08/2004

New Application No	Applicant Details
468/KOL/2004	DYSTAR TEXILFARBEN GMBH & CO. DEUTSCHLAND KG.; , 12/09/2003, Great Britain; "HIGH LIGHT FASTNESS REACTIVE RED DYES."

09/08/2004

New Application No	Applicant Details
469/KOL/2004	1)DR.SUBRATA PAL 2) DR.BISWAJIT KUMAR BISWAS 3) DR. TAMAL KANTI PAL.; , West Bengal, India; "AN IMPROVED METALLIC TOOTH IMPLANT."
470/KOL/2004	GULATI RAJEET SINGH.; West Bengal, India; "SURFACE MOUNTABLE HOLDER -CUM-GUARD FOR COMMON CONSUMER ARTICLES."
471/KOL/2004	CISA S.P.A.; , 10/10/2003, Italy; "SAFETY LOCK WITH FRONT COUPLING FOR SLIDING DOORS."
472/KOL/2004	SAMSUNG ELECTRONICS CO. LTD.; , 29/08/2003, Korea; "MOBILE COMMUNICATION TERMINAL AND METHOD FOR ONE TOUCH MESSAGE TRANSMISSION."
473/KOL/2004	LIFESCAN INC.; , 13/08/2003, United States of America; "PACKAGED MEDICAL DEVICE WITH A DEPLOYABLE DERMAL TISSUE PENETRATION MEMBER."

10/08/2004

New Application No	Applicant Details
474/KOL/2004	BORGWARNER INC.; , 23/10/2003, United States of America; "COMPLIANT CHAIN GUIDE WITH BLADE SPRING."
475/KOL/2004	CLARIANT GMBH; , 06/10/1997, 07/02/1998 04/09/1998, Germany; "USE OF PIGMENT YELLOW 155 IN ELECTROPHOTOGRAPHIC TONERS AND DEVELOPERS, POWDER COATINGS AND INKJET INKS."

11/08/2004

New Application No	Applicant Details
476/KOL/2004	DEFONTAINE.; , 27/08/2003, France; "SLEWING RING."
477/KOL/2004	FURUKAWA ELECTRIC NORTH AMERICA INC.; , 27/10/2003, United States of America; "FIBER- OPTIC CONNECTORS AND RELATED METHODS."
478/KOL/2004	SAINT-GOBAIN CALMAR INC.; , 13/02/2004, United States of America; "HOSE-END SPRAYER ASSEMBLY"
479/KOL/2004	FCOPERION WERNER & PFLEIDERER GMBH & CO. KG.; , 22/08/2003, Europe; "SCREW-TYPE EXTRUDING MACHINE COMPRISING MIXING AND KNEADING DISKS"
480/KOL/2004	THE TATA IRON AND STEEL COMPANY LIMITED.; Jharkhand, India; "A DEVICE FOR MONITORING THE FLAME INTENSITY INSIDE THE BLAST FURNACE THROUGH TUYERES ."

12/08/2004

New Application No	Applicant Details
481/KOL/2004	ANISHA ENTERPRISE; West Bengal, India; "SWITCHING MODULES."
482/KOL/2004	LALIT MAHAJAN ; West Bengal, India; "FLUID FLOW CONTROL DEVICE."

---	---

### (57) Abstract :

The invention relates to suspensions for trucks and trailers and to systems for clamping an axle housing to a combination suspension support member and spring in such a way that the axle housing is clamped and compressed uniformly on all four sides whereby there is no appreciable tendency for the axle housing to collapse or become deformed so as to require frequent retorquing of the clamping bolts. The system as shown in figure 10 uses interfitting bottom (7) and top (8) axle housing wraps. The bottom axle wrap (7) has upwardly extending sides (16) engaging opposite sides of the axle housing either directly or against interfitting downward extensions (17) on the top axle housing wrap (8). Vertical clamping bolts (11) cause the upwardly extending sides (16) on the bottom wrap (7) to press inwardly against the sides of the axle housing (5).

--	---

**(57) Abstract :**

The present invention provides for automatic placement of typographical features such as vertical stems or horizontal segments of a character (205) on high contrast pixel sub-component boundaries as part of a rendering process that uses separately controllable pixel sub-components (202, 203, 204) of pixels to represent different portions of the character (205). In order to identify the typographical features of the

character (205) that are to be aligned with high contrast pixel sub-component boundaries, topology of the character is analyzed at runtime. In display devices having vertical stripes of same-colored pixel sub-components (202, 203, 204), it has been found that character legibility is increased when the left edges of stems (206) are aligned with high contrast boundaries (208) between pixel sub-components. Processing time and resources are conserved by performing a partial, rather than a full, topological analysis of the character. For example, some font files include data structures that define the position of key control points associated with the character, thereby indicating where the stems or other typographical features are located, and the relationship between different typographical features.

(62) Filed on : N.A.	2) LAFOSSE XAVIER
(63) Divisional to Application No.: NIL	
(64) Filed on: N.A.	

(57) **Abstract** : The object of the present invention is a method of preparing a stable composition of radically copolymerisable monomers, said composition containing firstly at least one monomer which has at least one urea function in its formula and secondly at least one monomer which does not have an isocyanate function in its formula said method comprising preparing said monomer(s) having urea function(s) by reaction of two types of reagent: at least one radically copolymerisable monomer which has at least one isocyanate function in its formula with at least one amine selected from primary and secondary amines, and incorporating said monomer (s) which does(do) not have an isocyanate function in its(their) formula, prior to said reaction, together with one of said reagents, before adding the other of said reagents, and/or during the addition of said reagents, and/or after said reaction. Characteristically, within the context of said method, said reaction for preparing said monomer(s) having urea function(s) is carried out in the absence of non-radically polymerisable solvent, with said reagents, monomer(s) and amine(s), being incorporated in relative proportions such that the isocyanate equivalent/amine equivalent ratio be between 0.98 and 1.02, and advantageously equal to 1, and said monomer(s) having urea function(s) obtained at the end of said reaction is(are) maintained diluted in the solvent which is constituted of said monomer(s) which does(d0) not have an isocyanate function in its (their) formula, in the presence of dissolved oxygen.

(64) Filed on: N.A.	

(57) Abstract : The invention relates to methods for treating a patient suffering from acute coronary syndrome, but who is not suffering from a Q-wave myocardial infarction, comprising administration of a therapeutically effective amount of a GLP-1 molecule. The GLP-1 can be self-administered, and can be administered in one or more doses, as needed, on an intermittent or continuous basis, to optimize metabolism in cardiac tissue and to prevent cardiac damage associated with is chemia.

--	---

(57) Abstract :

A detonator device (40) and assembly (180) for initiating a plurality of signal transmission lines (a)-(e) with a pressure impulse. The detonator device comprising a detonator casing (50) having a signal receiving end and a firing end (60). The firing end of the detonator device being substantially shaped to conform with the pressure impulse initiation therein. The firing end has a contact wall (70) of substantially uniform thickness for contacting the plurality of signal transmission lines in a compatible connector element (65) and transmitting a pressure impulse thereto.

(54) Title of the invention: **METHODS AND SYSTEMS FOR ASYMMETRIC SUPERSAMPLING RASTERIZATION OF IMAGE DATA**

(51) International classification: G09G 5/28	(71) Name of the Applicant:
(30) Priority Data :	<b>MICROSOFT CORPORATION</b>
(31) Document No.: 09/546,422	Address of the Applicant:
(32) Date : 10/04/2000	<b>ONE MICROSOFT WAY, REDMOND, WA 98052-6399</b>
(33) Name of convention country : U.S.A.	
(66) Filed U/s. 5(2) : NO	(72) Name of the Inventors:
(61) Patent of addition to application No.: NIL	1) STAMM BEAT
(62) Filed on : N.A.	2) HITCHCOCK GREGORY C.
(63) Divisional to Application No.: NIL	3) BETRISEY CLAUDE
(64) Filed on: N.A.	

(57) Abstract : Methods and systems are disclosed for utilizing an increased number of samples of image data,

coupled with the separately controllable nature of RGB pixel sub-components, to generate images with increased resolution on a display device (98), such as liquid crystal display. The methods include scaling (86), hinting (88), and scan conversion (90) operations. The scaling operation (86) involves scaling the image data by factors of one in the directions perpendicular and parallel to the RGB striping of the display device. Hinting (88) includes placing the scaled image data on a grid that has grid points defined by the positions of the pixels of the display device, and

rounding key points to the nearest full pixel boundary in the direction parallel to the striping and to the nearest fractional increment in the direction perpendicular to the striping. Scan conversion (90) includes scaling the hinted image data by an oversampling factor (92) in the direction perpendicular to the striping. The oversampling factor (92) is equivalent to the denominator of the fraction increments of the grid. Scan conversion (90) also includes generating (94), for each region of the image data, a number of samples that equals the oversampling factor and mapping spatially different sets of the samples to each of the pixel sub-components.

(57) Abstract :

The invention relates to betamimetics of the general formula (1), wherein  $R^1$  represents a group (a), where  $R^3$  represents benzyl which can optionally be substituted by methoxy,  $R^4$  represents hydrogen, or  $R^3$  and  $R^4$  conjointly represent a  $-\text{CO}-\text{CH}_2-\text{O}-$  bridge, whereby the carbonyl group of this bridge is bonded to the nitrogen;  $R^2$  represents a group selected from (b) and (c), whereby  $R^5$  represents dimethylamino, methoxy or butoxy, X represents a nitrogen or a carbon,  $R^6$  represents methoxyphenyl if X is nitrogen, or if X is carbon, an annellated phenyl ring likewise linked to X. The invention also relates to a method for the production of said betamimetics and to their use as medicaments.

--	---

(57) **Abstract :** The invention provides methods for regulating cell-mediated immune responses, immune system diseases and allograft transplant rejection by interfering with the interaction of at least three different cell surface molecules with their natural ligands. A first cellular interaction is mediated by CD28/B7/CTLA4, a second interaction is mediated by CD40/CD154, and a third interaction is mediated by LFA-1 interaction with its ligands. Regulation of a cell-mediated immune response affects immune system diseases such as those associated with allograft transplantation.

(57) Abstract : The invention describes the identification of pre-messenger RNA processing as a novel target of environmental stress caused for example by lithium and sodium toxicity. Overexpression of different types of proteins (or protein fragments) from different organisms but all involved in pre-mRNA processing, protects yeast from salt stress, which indicates that any stimulation of this process, independently of its mechanism, may counteract the toxic effects of mineral salts. A similar phenotype of tolerance to NaCl and to LiCl has been observed by overexpression of these types of proteins in transgenic *Arabidopsis* plants, demonstrating the generality of this protective effect in eukaryotic cells and organisms.

### (57) Abstract :

A closure (20, 20') structure for a container (22) includes a body (26) having a containing wall (36 and 48) for closing the container (22); the containing wall (36 and 48) having a dispensing orifice (56). A lid (24, 24') is operatively associated with the containing wall (36 and 48) to cover the dispensing orifice in a closed position and uncover the dispensing orifice (56) when the lid (24, 24') is moved away from the closed position. In one embodiment, a tamper-indicating member (94, 84') includes a press portion (116) connected by a hinge (110) to the lid (24), and an anchor portion (120) connected to the body (26), the press portion (116) connected at a frangible junction (124) to the anchor portion (120), whereby the press portion (116) can be moved sufficiently relative to the body (26) to

separate the press portion (116) from the anchor portion (120). The anchor portion (120) is connected to the body (26) by an anchor member (130) extending radially from the body (26). The anchor portion (120) includes an aperture (138). The body anchor member (130) includes a radially extending head (134) which captures the aperture (138) when the anchor portion (120) is pressed to the body (26). The head (134) can be flattened to make the connection between the anchor portion (120) and the body (25) more secure.

(57) Abstract : A disposable substantially dry cleansing article is disclosed having a lathering surfactant and a C<sub>8</sub>-C<sub>12</sub> alkyl diol impregnated into a flexible substrate such as a non-woven cloth. The alkyl diol primarily is a process aid which may concurrently improve aesthetics and increase latherability. Hexylene glycol is the preferred diol. Best performance is achieved with an alkyl diol to total lathering surfactant weight ratio from about 1:1 to about 1:8.

--	---

(57) Abstract : The invention relates to novel 8 $\beta$ -substituted estratrienes of the general formula (I), wherein R<sup>2</sup>, R<sup>3</sup>, R<sup>6</sup>, R<sup>6'</sup>, R<sup>7</sup>, R<sup>7'</sup>, R<sup>9</sup>, R<sup>11</sup>, R<sup>11'</sup>, R<sup>12</sup>, R<sup>14</sup>, R<sup>15</sup>, R<sup>15'</sup>, R<sup>16</sup>, R<sup>16'</sup>, R<sup>17</sup> and R<sup>17'</sup> are defined as in the description and R<sup>8</sup> represents a straight -or branched-chained, optionally partially or completely halogenated alkyl or alkenyl group with up to 5 carbon atoms, an ethinyl or prop-1-ynyl group. The inventive estratrienes are used as pharmaceutically active substances that have in vitro a higher affinity to estrogen receptor preparations of rat prostate than to estrogen receptor preparations of rat uterus and which in vivo preferably have a preferential effect on bone material as compared to uterus and/or a pronounced effect with respect to the simulation of the expression of 5HT<sub>2a</sub> receptor and transporter. The invention further relates to the production of these novel compounds, to their use in therapy and to the pharmaceutical forms of administration that contain said novel compounds. The invention further describes the use of said compounds for treating estrogen-deficiency related diseases and conditions and to the use of an 8 $\beta$ -substituted estratriene structural part in the overall structures of compounds that are characterized by a dissociation in favor of their estrogen effect on the bone as compared to the uterus.

(57) Abstract : The improved green strength, green elongation, and green relaxation properties of isobutylene-based elastomers at elevated temperatures along with improved aging and barrier properties are achieved by blending semi-compatible, semi-crystalline copolymers with the isobutylene elastomers. The semi-crystalline copolymers are typically copolymers of ethylene and an alpha-olefin having from 4 to 16 carbon atoms. The improved properties are maintained in subsequent rubber compounds containing said blends and are particularly useful in tire and pharmaceutical container applications.

Compositions and methods for the therapy and diagnosis of cancer, such as breast cancer, are disclosed. Compositions may comprise one or more breast tumor proteins, immunogenic portions thereof, or polynucleotides that encode such portions. Alternatively, a therapeutic composition may comprise an antigen presenting cell that expresses a breast tumor protein, or a T cell that is specific for cells expressing such a protein. Such compositions may be used, for example, for the prevention and treatment of diseases such as breast cancer. Diagnostic methods based on detecting a breast tumor protein, or mRNA encoding such a protein, in a sample are also provided.

(57) Abstract : The present invention is based on the development of a dual promoter system (preferably a RNA pol I- pol II system) for the efficient intracellular synthesis of viral RNA. The resultant minimal plasmid-based system may be used to synthesize any RNA virus, preferably viruses with a negative single stranded RNA genome. The viral product of the system is produced when the plasmids of the system are introduced into a suitable host cell. One application of the system is production of attenuated, reassortant influenza viruses for use as antigens in vaccines. The reassortant viruses generated by cotransfection of plasmids may comprise genes encoding the surface glycoproteins hemagglutinin and neuraminidase from an influenza virus currently infecting the population and the internal genes from an attenuated influenza virus. An advantageous property of the present invention is its versatility; the system may be quickly and easily adapted to synthesize an attenuated version of any RNA virus. Attenuated or inactivated RNA viruses produced by the present invention may be administered to a patient in need of vaccination by any of several routes including intranasally or intramuscularly.

(57) Abstract :

An improved screw-on assembly for coupling line connectors with spouts has been invented. The invention can be used with bag-in-box packaging or with a variety of other applications requiring fluid coupling. In one embodiment, threading is accomplished by making internal thread on a line connector with flexible tabs located on the spout. Deformation of the tabs during threading provides a restorative force that stabilizes the assembly during threading. Cooperation of the deformable tabs with structures near the end of the thread provides for self-locking of the assembly. In addition, the tabs are situated on a flange, providing compatibility of the present invention with prior art line connectors.

(57) Abstract : The invention relates to pumps (1), in particular oil pumps for internal combustion engines,

comprising a gear-or rotor-assembly, with one each of a pressure-and suction region (7,5) arranged in a pump housing, which may be sealed from each other, by means of an axially displaceable piston valve (10), which defines a supply chamber (9) and a housing cover (24), closing the pump housing (8). The pressure region (7) comprises a pressure channel, connected to the waist (12) of the control piston (10), whereby the control piston (10) co-operates with a plunger (13) on the end thereof facing the supply chamber (9), which is arranged at right angles to the control piston (10). Said plunger (13) is pre-tensioned against the control piston (10), by means of a pressure spring (14) and

said plunger (13) and control piston (10) are connected by means of a sliding surface (15), arranged at an angle to the control piston axis (4).

(57) Abstract : This invention provides polymer filaments having a multilobal cross-section. The cross-section can have a filament factor of about 2.0 or greater and a tip ratio of greater than about 0.2. The filaments may be used as-spun as a spin-oriented feed yarn or as a partially-oriented yarn. The multifilament yarns made from these filaments are useful to make articles with subdued luster and low glitter.

(57) Abstract : An ultraviolet pasteurizer capable of being used selectively according to whether a person is present or absent in a room to be pasteurized, characterized by comprising an ultraviolet lamp, an openable shielding door blocking off or unblocking off the ultraviolet ray radiated from the ultraviolet lamp to the outside, an internal radiation chamber formed on the inner side of the shielding door in the state where the shielding door is closed, an inlet and an outlet allowing the internal radiation chamber to communicate with the outside, and an air blow fan sucking fresh air from the inlet to the internal radiation chamber, allowing the air to pass near the ultraviolet lamp, and blowing out the air from the outlet.

**(57) Abstract :**

A user selects a wireless network mapping option on their computer and is presented with a list of names of electronic devices coupled to the wireless network to which the computer is coupled. When one of the electronic devices transmits a wireless identification signal to the computer, a visual cue identifies the default name associated with the electronic device in the list. The user may then rename the default name to a local name. The user may also opt to transmit a wireless identification signal of their own to one or more of the electronic devices coupled to the wireless network. Alternatively, the user may select one or more electronic devices from the list, and nudge the selected devices by sending an activation signal, causing the electronic devices to identify themselves using an audio or visual cue.

**(57) Abstract :**

The present invention provides soluble CTLA4 mutant molecules which bind with greater avidity to the CD80 and/or CD86 antigen than wild type CTLA4 or non-mutated CTLA4Ig. The soluble CTLA4 molecules have a first amino acid sequence comprising the extracellular domain of CTLA4, where certain amino acid residues within the S25-R33 region and M97-G107 region are mutated. The mutant molecules of the invention may also include a second amino acid sequence which increases the solubility of the mutant molecule.

(57) Abstract : The present invention involves an artificial nose (10) having an array (12) comprising at least a first dye and a second dye in combination and having a distinct spectral response to an analyte. In one embodiment, the first and second dyes are from the group comprising porphyrin, chlorin, chlorophyll, phthalocyanine, or salen. In a further embodiment, the first and second dyes are metalloporphyrins. The present invention is particularly useful in detecting metal ligating vapors. Further, the array (12) of the present invention can be connected to a wavelength sensitive light detecting device.

---	---

**(57) Abstract :**

The invention concerns a tyre P designed to be mounted on a rim whereof the seats form with the axis of rotation an angle ranging between 0 DEG and 6 DEG , and comprising a radial carcass reinforcement (1) anchored in each bead B to a bead core (2) forming a turn-up (10), said bead core (2) being radially topped, axially between the main reinforcement (1) and its turn-up (10), with at least an extruded profile (3) of rubber mixture substantially triangular in shape and with high Shore A hardness. The invention is characterised in that the meridian profile of the axially outer surface of each bead B having definite curvature gap, is combined with the presence above the bead core of an extruded profile (3) of rubber mixture with high hardness, said extruded profile (3) being axially in contact over its entire height with the turn-up (10) of the carcass reinforcement (1), and separated from the main part of said reinforcement (1) by an extruded profile (4) of rubber mixture with low hardness, while a third extruded profile (5), axially external to the turn-up (10), consists of a mixture with low hardness.

**(57) Abstract :**

The invention relates to a composite component consisting of two or more profiles (1) and (2) and to a method for the production thereof. According to the invention, at least one profile (1), with one free end, abuts against the second profile (2) or is inserted into the second profile (2). The invention is characterized in that reinforcing elements (3, 3'; 6, 6'; 23; 25; 21), which from a positive engagement with profiles (1) and (2), are provided in the area of the junction (10) of profiles (1) and (2), and profiles (1) and (2) are interconnected by a thermoplastic material that is sprayed or shrunk on in the area of the junction (10).

(57) Abstract : A process for manufacturing black leaf tea that looks and feels like orthodox processed tea but has the liquor characteristics of a fuller fermented CTC process tea. The process involves withering a first supply of freshly plucked tea leaves, macerating the withered leaves, allowing the macerated withered leaves to ferment to produce macerated dhool, withering a second supply of freshly plucked tea leaves, mixing the macerated dhool obtained from the first supply of leaves with the withered leaves obtained from the second supply of leaves, rolling the mixture, allowing the rolled mixture to ferment, and drying the fermented mixture to yield black leaf tea.

### (57) Abstract :

This invention relates to an improved dosing assembly (valve/feed line/liquid collecting vessel) which permits nearly immediate response time to an actuator signal. Such an assembly is used for the controlled introduction of any liquid through a valve into a collecting vessel. In particular, the inventive assembly exhibits substantially no leakage from the feed line into the liquid collecting vessel when the valve is closed and an instantaneous introduction of the feed line liquid into the liquid collecting vessel upon opening of the valve, both when a liquid possessing a surface tension of about 50 dynes/cm<sup>2</sup> is used as the measurement standard. This assembly is particularly and preferably suited for injecting colorants into reactants for the production of polyurethane slabstock foam and permits a substantial reduction in foam waste due to low colorations during an on/off cycle. Preferably, this inventive assembly comprises a ball valve, a manifold, and a connector pipe which may contain at most 30 mL of liquid at any single moment and which is measured in diameter of at most 0.42 inches (about 1.07 cm). Such a connecting pipe permits substantially instantaneous shut-off and -on without appreciable leakage or pressure drop and without the need to utilize a high throughput flow rate. Also, such a specific connecting pipe is wide enough to permit high throughput rates should the need arise. The valve/pipe/manifold configuration is contemplated within this invention.

**(57) Abstract :**

The invention relates to a shaped element for use in a building construction and to a building construction erected using said shaped element. The aim of the invention is to produce a building construction which is simple and economical to erect and which can be taken down easily. To this end, the shaped element (2) has a connecting structure (19) which can be connected to a counter-structure (20) configured in a connecting area of another shaped elements (2) with a positive fit. The shaped elements (2) can be interconnected with a positive fit in order to erect at least parts of the building construction using said shaped elements (2). Cavities (18) in the shaped elements (2) can be filled e.g. with water in order to improve the static of the building construction.

**(57) Abstract :**

Countergravity casting of metals and metal alloys provides for melting of the metallic material under subambient pressure, evacuation of a gas permeable or impermeable mold (15) under subambient pressure, and controlled, rapid filling of the mold (15) while it is maintained under the subambient pressure by applying gas pressure locally on the molten metallic material in a sealed space defined by engagement of a mold base (13) and a melting vessel with a seal therebetween. The gas pressure applied locally in the sealed space establishes a differential pressure on the molten metallic material to force it upwardly through the fill tube (16) into the mold (15).

**(57) Abstract :**

A dispensing article, particularly for dispensing towelettes, is provided and includes a container body (2) for storing the towelettes and a lid (4) hingedly attached to the body (2). The container is formed from a floor panel (6), left (8) and right (10) side panels, front (12) and rear (14) panels and a deck panel. The deck panel (16) includes a sealing section (18) with a dispensing aperture (24). The sealing section (18) is domed outwardly away from the floor (6). A downwardly projecting plug (26) on an interior surface of the lid (4), in a closed position, engages within the dispensing aperture (24) forming a seal therewith. The domed nature of the sealing section (18) improves the air tight closure and shortens the required length of the plug (26) to minimize aesthetically displeasing sink marks in the plastic wall of the plug.

**(57) Abstract :**

A discharge lamp bulb includes a light transmissive envelope and at least one conductive fiber disposed on a wall of the envelope, where the fiber has a thickness of less than 100 microns. The lamp may be either electrodeless or may include internal electrodes. Suitable materials for the fiber(s) include but are not limited to carbon, silicon carbide, aluminium, tantalum, molybdenum, platinum, and tungsten. Silicon carbide whiskers and platinum coated silicon carbide fibers may also be used. The fiber(s) may be aligned with the electrical field, at least during starting. The lamp preferably further includes a protective material covering the fiber(s). For example the protective material may be a sol gel deposited silica coating. Noble gases inside the bulb at pressures in excess of 300 Torr can be reliably ignited at applied electric field strengths of less than  $4 \times 10^5$  V/m. Over 2000 Torr xenon, krypton, and argon respectively achieve breakdown with an applied field of less than  $3 \times 10^5$  V/m.

### (57) Abstract :

Aircraft (10) carries at least two clusters of barrel assemblies. At least one cluster is oriented normal to the longitudinal axis of aircraft (10) and at least one other cluster is oriented parallel to the longitudinal axis of aircraft (10). Each cluster comprises a plurality of barrel assemblies, with each barrel having a plurality of axially disposed projectiles therein. Each projectile is associated with a discrete, sequentially activated propellant charge for propelling it through the muzzle of the barrel. Various methods of deploying a multiplicity of projectiles onto a target from aircraft (10) are also described and claimed. The projectiles deployment might occur at any time while aircraft (10) is approaching the target, overflying the target, or departing from the target. The projectiles may include smoke canisters, high explosive canisters, flares, electronic and thermal countermeasures, mines, grenades or cameras.

(57) **Abstract** : Projectile (10) is for use with barrel assemblies of the type having a plurality of axially disposed projectiles within a bore and wherein discrete propellant charges are provided for propelling respective projectile sequentially from the bore. Projectile (10) comprises expandable sleeve (11) encircling at least part of core (12). Sleeve (11) and core (12) have wedging surfaces (14) operable to deform trailing part (21) of sleeve (11) into sealing engagement with the bore in response to pressures exerted on projectile (10). When projectiles (10) are axially disposed in the bore, rear face (24) of the leading projectile cooperates with leading face (20) of the trailing projectile to define a discrete space about spine (23) for receipt of the propellant charge. Sleeve (11) is retained about core (12) during travel to the target.

**(57) Abstract :**

A device for manufacturing a three-dimensional product, which device comprises a work table on which said three-dimensional product is to be built, a powder dispenser which is arranged to lay down a thin layer of powder on the work table for the formation of a powder bed, a ray gun for giving off energy to the powder whereby fusion of the powder takes place, members for controlling of the beam released by the ray gun across said powder bed for the formation of a cross section of said three-dimensional product through fusion of parts of said powder bed, and a controlling computer in which information about successive cross sections of the three-dimensional product is stored, which cross sections build the three-dimensional product, the controlling computer intended to control said members for guiding the ray gun across the powder bed according to a running schedule forming a cross section of said three-dimensional body, whereby said three-dimensional product is formed by successive fusion of successively formed cross sections from powder layers successively laid down by the powder dispenser.

**(57) Abstract :**

Figure: 3

A automated transaction machine (20) with a cross-vender software and hardware platform architecture. The machine includes a computer (22) and a plurality of transaction function devices (32) in operative connection with the computer. The machine further includes a plurality of device driver components (38) that generally correspond to each of the transaction function devices. The device drivers are operative responsive to communication from an XFS layer (28) to control the operation of the transaction function devices. The machine further includes a terminal application (22) and an ODS layer (26). The ODS layer includes a plurality of ODS components (36) that generally correspond to the device drivers and/or transaction function devices. The ODS components responsive to the terminal application are operative to have the device drivers control the operation of the transaction function devices through communication with the XFS layer.

#### (57) Abstract :

The invention concerns an apparatus comprising a body (2) wherein a piston (6) is mounted sliding alternately driven by an incompressible fluid under pressure, said body containing part of a tool (4) which is guided in translation in a wear sleeve (3), the end of the tool located inside the body being subjected to the repeated impacts of the piston (6), while the other end projects beyond the body and is designed to be supported on the rock or analogue to be destroyed, the tool being retained in the body by at least a transverse key (13). One of the keys (13) retaining the tool passes through aligned holes provided in the body (2), into the wear sleeve (3), and overlaps inside the inner cylindrical space of the sleeve, the tool (4) having a transverse groove (12) for the key (13) to pass through.

(57) Abstract : The present invention provides compositions and method for administering oxybutynin while minimizing the incidence and or severity of adverse drug experiences associated with oxybutynin therapy. In one aspect, these compositions and methods provide a lower plasma concentration of oxybutynin metabolites, such as N-desethyloxybutynin, which is presumed to be contributing at least in part to some of the adverse drug experiences, while maintaining sufficient oxybutynin plasma concentration to benefit a subject with oxybutynin therapy. The invention also provides isomers of oxybutynin and its metabolites that meet these characteristics of minimized incidence and/or severity of adverse drug experiences, and maintenance of beneficial and effective therapy for overactive bladder

(57) Abstract : The present invention concerns easily removable treatment tubes from fabric treatment apparatuses in order to facilitate replacement of such rolls for treatment modification, cleaning, disposal, or any other desirable purposes. Such treatment tubes (102) are generally hollow and may be coated with any standard fabric treatment surface, including sandpaper, diamond grit wires, brushes, and the like. The ability to easily remove and dispose of such treatment tubes (102) thus provides a significant cost advantage to the manufacturer.

(57) Abstract :

The block type CVT belt according to the present invention comprises at least one endless load carrier having tensile members. A plurality of blocks (20) are transversely engaged with the load carrier in a lengthwise direction of the belt. The center of gravity of each block is asymmetrically located in each block. Each block has thermoset or thermoplastic over-molding. The over-molding is attached to the metal block (10) by use of an adhesive. The preparation of the metal reinforcing member is accomplished by mechanical tumbling means, as opposed to chemical preparation. Each block also comprises at least one slot for receiving the load carrier. Each slot having an upper concave surface (22) and a lower surface (23) having a complex shape. The upper concave surface receives a corresponding convex surface or tooth on an upper surface of the tensile member. Each slot is provided with a complex radius between a central pillar and an upper and lower arm in order to avoid stress risers. The load carriers are slightly compressed in each groove to significantly reduce skew.

**(57) Abstract :**

A data recorder for adequately managing the contents of data and reproduced info even if a part of AV data is deleted. When a part of a clip is deleted and an ATC-sequence becomes discontinuous, the value of an offset\_STC\_id of the first STC sequence on the ATC sequence is so determined that the value of the stc\_id (value for identifying an STC-sequence) of each STC-sequence contained in the part of the ATC-sequence, after the ATC discontinuous point. The invention can be applied to a technique of recording an AV stream on an optical disc.

(57) Abstract : A process is disclosed for increasing the fluorine content of an olefinic compound of the formula  $C_nH_mF_{2n-m}$ , where n is an integer from 2 to 6 and m is an integer from 1 to 2n. The process involves (a) contacting the olefinic compound with a metal fluoride composition of the formula  $(AgF)(MF_2)_x$  where M is selected from the group consisting of Mn, Fe, Co, Ni, Cu, Zn and mixtures thereof and x is a number from 0 to 1, at a temperature above 200°C sufficient to transfer F from the metal fluoride composition to the olefinic compound, thereby producing a chemically reduced metal fluoride composition comprising metallic silver, (b) oxidizing the reduced metal fluoride composition from (a) in the presence of HF to regenerate the metal fluoride composition of the formula  $(AgF)(MF_2)_x$ ; and (c) recycling regenerated metal fluoride composition of (b) to (a). Also disclosed are a novel composition of the formula  $Ag_{10}F_8C_2$ ; and a process for producing hexafluoroethane which involves heating  $Ag_{10}F_8C_2$  to a temperature sufficient for its decomposition.

**(57) Abstract :**

The present invention is an improved type of distillation of water. Usual distillation is related to a liquid's boiling point. However, it is possible to distill significant quantities of water at temperatures well below the boiling point. During distillation a compound is taken from a liquid-phase to the gas phase and then condensed to the liquid again to get a pure liquid. The present invention uses water sprayed (105) and adsorbed onto a solid surface such as micro-powder (104) made from wood as a starting material. Absorbing water onto such a surface results in rapid evaporation with a relatively low temperature gradient when the water and particles are agitated. The present invention could be characterized as solid-phase distillation.

### (57) Abstract :

Figure: 6

A liquid crystal display device for vehicle capable of assuring a high visibility even under low temperature environment without increasing a power consumption and size, wherein, as shown in Fig. (b), a displayed vehicle speed Ddis according to a vehicle speed D shown in Fig. 6 (a) is switched with a hysteresis of a speed  $\pm 0.7$  Km/h under a room temperature or a high temperature environment of  $45^{\circ}\text{C}$  or higher, i.e., even if the vehicle speed D is varied between 51.4 and 52.6 Km/h, the displayed vehicle speed Ddis is maintained at 52 Km/h and, as shown in Fig. (c), the displayed vehicle speed Ddis is switched with a hysteresis of a speed  $\pm 1.0$  Km/h under a low temperature environment of less than  $45^{\circ}\text{C}$ , whereby, even if the vehicle speed D is varied between 51.1 and 52.9 Km/h, the displayed vehicle speed Ddis can be maintained at 52 Km/h.

(57) Abstract :

The present invention relates to a process for the aqueous extraction, fractionation and enzymatic treatment of oilseed materials to generate valued products with no significant low value by-product or waste streams. In particular, the fractionation scheme generates a protein-fibre feed ingredient principally for use with ruminant animals and a second dephytinized high protein fraction. The dephytinized high protein fraction has value as feed ingredient for a variety of species of animals.

(57) Abstract : A novel strain of *Streptomyces galbus* that produces metabolites and exhibits pesticidal activity is disclosed. In addition, a supernatant of the novel strain with pesticidal activity is disclosed. An ethyl acetate-soluble, small molecular weight, alkali stable, metabolite produced by the novel strain *Streptomyces galbus* with pesticidal activity against lepidopteran insects is provided. Also included are methods for fermenting the novel strain of *Streptomyces galbus* and increasing the bioactivity of the pesticidal activity. Also included are methods for protecting or treating plants from caterpillars comprising the step of applying to a plant an effective amount of the novel *Streptomyces galbus* train, the metabolites produced by the strain, or a combination thereof.

(57) Abstract : Missile (10) includes one or more of barrel assemblies (11) which are displaced from the centre of gravity of missile (10). Each barrel assembly (11) includes a plurality of projectiles axially disposed within the barrel, and each projectile is associated with a discrete propellant charge for propelling the projectile sequentially from the barrel. Each array of barrel assemblies (11) is capable of selectively firing the projectiles from selected barrels whereby missile (10) is accelerated by the reactionary force generated by said firing of projectiles and the missile is deflected onto a new course or trajectory. This enables missile (10) to be steered to intercept its target even if the target is undertaking evasive manoeuvre. Each barrel assembly (11) can include up to twelve projectiles.

### **(57) Abstract :**

In accordance with the present invention, an apparatus and method are provided for preparing a substrate (5) for adhering a material onto the surface of the substrate (5). The surface of the substrate (5) to be prepared is exposed to electromagnetic radiation comprising ultra-violet radiation, whereby the substrate surface is decontaminated and/or modified by exposure to the ultra-violet radiation. Also disclosed is the use of an electro-ionization device and/or an infra-red radiation source in conjunction with the electromagnetic radiation to modify the surface of the substrate (5) to be prepared. Additionally, the use of gaseous components to modify the chemical functionalities on the substrate's (5) surface is described. The invention has diverse applications, including, shoe fabrication, aircraft and space vehicle manufacture, automobile manufacturing and deposition of biochemical samples onto microarray well-plates.

**(57) Abstract :**

Artificial modulation of ascorbate level was investigated in mice capable of *de novo* synthesis of ascorbate. When mice were given exogenous ascorbate or its physiological precursor, L-gulono- gamma -lactone, the plasma level of ascorbate was elevated substantially but immediately returned to the basal levels. Comparably, the administration of ascorbate oxidase caused a rapid disappearance of plasma ascorbate but followed by an immediate restoration of ascorbate. These results indicate the difficulties encountered in the modulation of ascorbate level in the animal. However, the circulation life of the exogenous ascorbate oxidase in the animal was successfully extended by chemical modification with methoxypolyethylene glycol. The modified enzyme retained a full activity and exerted a remarkably prolonged depletion of plasma ascorbate compared with the native enzyme. This study suggests that the chemically modified ascorbate oxidase should find many uses in the animal studies on ascorbate since it was found to deplete plasma ascorbate even in the ascorbate-synthesizing animal in the absence of dietary control. The enzyme should prove to be useful in tumor control because there are tumor systems in mice and man amenable to the manipulation of ascorbate level.

(57) Abstract : A filter for molten metal is an open-pored porous material comprising particles of refractory material embedded in and bonded together by a carbon matrix bonding material. The filter can be made by forming a porous article from refractory particles, e.g. refractory oxide, carbide or graphite, and a carbon-rich binder, e.g. tar, pitch or an organic (preferably aromatic) polymer that degrades to form carbon on pyrolysis, and then firing the porous article to generate the carbon matrix in which the refractory particles are embedded. The porous article is preferably made by coating reticulated polyurethane foam with binder and refractory particles, and firing at preferably no higher than 800°C

**(57) Abstract :**

In step S1, an address generation block generates and pre-encodes a synchronization signal, address data, and address information composed of an error correction code of the address data which are to be recorded on an optical disc and outputs them to a modulation block. Simultaneously with this, a carrier signal generation block generates a carrier signal for carrying the address information and outputs it to the modulation block. In step 2, the modulation block MSK-modulates the carrier signal input from the carrier signal generation block with the pre-encoded address information input from the address generation block and the obtained MSK-modulated signal is output to a wobble formation block. In step S3, the wobble formation block forms on the optical disc a spiral groove wobbled in accordance with the MSK-modulated signal input from the modulation block. On this optical disc, an arbitrary address can be accessed rapidly.

(57) **Abstract :** Switching valve and a regenerative thermal oxidizer (10) including the switching valve (20). The valve of the present invention exhibits excellent sealing characteristics and minimizes wear. The valve (20) has a seal plate (100) that defines two chambers (25), each chamber being a flow port that leads to one of two regenerative beds of the oxidizer (10). The valve also includes a switching flow distributor (50) which provides alternate channeling of the inlet or outlet process gas to each half of the seal plate (100). The valve operates between two modes: a stationary mode and a valve movement mode. In the stationary mode, a tight gas seal is used to minimize or prevent process gas leakage. The gas seal also seals during valve movement.

**(57) Abstract :**

Barrel assembly (10) includes rifled barrel (11) loaded with several pyrotechnic projectiles (12) for selective firing by an electronically controlled system. Each projectile (12) includes body (14), housing (15) containing pyrotechnic material (16), and trailing collar (17) supported on trailing hub (18) of body (14) for limited axial movement. Collar (17) includes leading wall (20) abutting trailing wall (21) of housing (15) and an internally tapered thickened rear part (24) engaging nose (25) of trailing projectile (12) to wedge into sealing engagement with barrel (11). Hub (18) supports propellant capsule (30) connected by electrical leads (31) to contacts (32) on outer cylindrical wall (33) of housing (12). Complementary contacts (34) are supported in barrel (11). Alignment of contacts (34) with contacts (32) occurs during the loading process. Fuse (35) extends between capsule (30) and primer (36) so that material (16) explodes a set time after firing projectile (12) from barrel (11).

(57) Abstract :

A process for the preparation of 3-substituted ethyl-6,7,8,9-tetrahydro-2-methyl-4H-pyrido[1,2,-a]pyrimidin-4-one of formula (IIB) where X may be halo, acyloxy, or sulfonyloxy such as tosyloxy or mesyloxy, an intermediate in the synthesis of the anti-psychotic risperidone. The process comprises hydrogenation of 3-substituted ethyl-2-methyl-4H-pyrido[1,2,-a]pyrimidin-4-one in aqueous inorganic acid medium at atmospheric to 60 psi at 0-100° C in the presence of a metal catalyst and the product is isolated. A process for the preparation of risperidone of formula (I) comprising condensation of 3-substituted ethyl-6,7,8,9-tetrahydro-2-methyl-4H-pyrido[1,2,-a]pyrimidin-4-one with 6 fluoro-3-(4-piperidinyl)-1, 2-benzosoxazolein water in the presence of an inorganic base at 25 - 100 DEG C and the product is isolated.

(57) Abstract : A block copolymer for hair styling compositions includes hydrophilic and hydrophobic blocks which allow for optimization of desirable characteristics of the hair styling composition, such as flow onto the hair, prevention of curl droop, style retention at high humidity, tack, hardness, resistance to flaking, restylability, volumizing, and washability from the hair. The copolymer includes a polyacrylate backbone of hydrophobic blocks, with hydrophilic acrylate side chains. The copolymer is suitable for the formulation of a number of personal care, household, hair care, skin care and other formulations. The copolymer is suited to incorporation into low VOC hydro-alcoholic hair styling compositions to meet reduced VOC regulations.

**(57) Abstract :**

The present application concerns a method for monitoring the hydrocarbon and water production from different production zones in a hydrocarbon reservoir and/or injection wells and detection of different phenomena such as e.g. local variations in pH, salinity, hydrocarbon composition, temperature, pressure, microorganisms, and the difference/ratio between production of formation and/or injection water from various zones in a hydrocarbon reservoir. The method comprising dividing regions around wells in the reservoir into a number of sections, and injecting or placing specific tracers with unique characteristics for each section into the formation in these regions. The tracers are chemically immobilized/integrated in the formation or in constructions/filters around the wells, the tracers (tracer carriers) being chemically intelligent and released as a function of specific events. Detecting the tracers downstream provides information about the various zones. The invention may be used as a local alarm system for water breakthrough, or for improved oil and gas recovery (IOR) in horizontal production and injection wells.

**(57) Abstract :**

A system and method are described to programmatically manage access between one or more nodes (12) and a plurality of associated devices (16, 18, 20, 22), such as shared storage units. Each node (12) is programmed to include a data structure (40, 46), which identifies whether an associated device (16, 18, 20, 22) is to be within the scope of the respective node (12). The data structure (40, 46) may include persistent and/or temporary lists (48, 50). Each device (16, 18, 20, 22) may be programmatically masked relative to the node (12) by dynamically modifying the data structure (40, 46) of the node (12), such as by employing a predetermined interface (60, 70, 80, 90).

**(57) Abstract :**

Disclosed are refractive index profiles for total dispersion compensating optical waveguide fibers for use in high data rate, long length telecommunications systems. The optical waveguide fibers in accord with the invention provide substantially equal compensation of total dispersion over a range of wavelengths, thus facilitating wavelength division multiplexed systems. Also disclosed are spans of optical waveguide fiber that include a length of transmission fiber together with a length of the compensating fiber. The spans are joined end to end in series arrangement to form the optical waveguide fiber part of a telecommunication system.

(57) Abstract : A system and method for testing and/or evaluating employees or potential employees is disclosed. A computer arranges a plurality of applicants in a stack ranked table (306). The table may rank or re-rank applicant against each other from best to worst, after successive screening (304), selecting (308), and/or interviewing (310) stages for a particular job. Performance evaluation of hired workers may be fed back to the computer for adjusting the system and method. Competencies shown to be predictive of successful performance of a given type of job are tested for at various stages in an online testing system.

**(57) Abstract :**

Initiating interactivity with a received enhanced digital TV program that is being displayed in full screen mode without obstructing the existing views of the TV program. The method includes displaying a video component of the enhanced digital TV program in a full screen mode on a display, extracting information related to a broadcaster's station ID from a data component of the enhanced digital TV program, displaying the station ID in a changed appearance on the display according to the information, and accepting a viewer input selection to enter an interactive mode in response to the changed appearance. The station ID may be represented in a changed appearance only when new ancillary digital content is received as part of reception of the enhanced digital TV program. As a result of the viewer input selection, display of the ancillary digital content of the TV program on a portion of the screen may result.

(57) Abstract : The present invention is directed to the use of a mixture of non-light sensitive organic silver salts in a color photothermographic system comprising a blocked developing agent for color imaging. At least one of the organic silver salts is the sole of primary silver donor during thermal development and at least one other organic silver salt, present at levels in the range of 30,000 to 60,000 mg/mol of silver halide, effectively inhibits fog during thermal development of the photothermographic element. In one embodiment, and the system comprises a mixture of at least two organic silver salts, wherein the first organic silver salts exhibits a cLogP of 0.1 to 10 and a Ksp of 7 to 14 and wherein the second organic silver salt exhibits a cLogP of 0.1 to 10 and Ksp of 14 to 21.

The following Patent application have been published under Section 11A of the Patents (Amendment) Act, 2002

(21) Application No.: IN/PCT/2002/01539/MUM A (22) Date of filing of Application: 31/10/2002  
(PCT/EP01/05168)

(54) Title of the invention: ANTHRANYL AMIDES AND THEIR USE AS MEDICAMENTS

(51) International classification: C07C 237/28  
(30) Priority Data :  
(31) Document No.: 100 23 484.4  
(32) Date : 09/05/2000  
(33) Name of convention country : GERMANY  
(66) Filed U/s. 5(2) : NO  
(61) Patent of addition to application No.: NIL  
(62) Filed on : N.A.  
(63) Divisional to Application No.: NIL  
(64) Filed on: N.A.

(71) Name of the Applicant:  
**SCHERING AKTIENGESELLSCHAFT**  
  
Address of the Applicant:  
**MULLERSTRASSE 178, 13342 BERLIN,  
GERMANY**  
  
(72) Name of the Inventors:  
1) KRUGER MARTIN  
2) HUTH ANDREAS  
3) PETROV ORLIN  
4) SEIDELMANN DIETER  
5) THIERAUCH KARL-HEINZ  
6) HABEREY MARTIN  
7) MENRAD ANDRES  
8) ERNST ALEXANDER

(57) Abstract : The invention relates to substituted anthranyl amides, to their use as medicaments, for treating diseases caused by persistent angiogenesis, and to their intermediate products for producing the anthranyl amides.

Figure: NIL.

**Publication After 18 months**

The following Patent application have been published under Section 11 A of the Patents (Amendment) Act, 2002

(21) Application IN/PCT/2002/01540/MUM A (22) Date of filing of 31/10/2002  
No.: (PCT/IB01/00973) Application:

(54) Title of the invention: 2-AMINOCARBONYL-9H-PURINE DERIVATIVES

(51) International classification: C07H 19/167

(30) Priority Data :

(31) Document No.: 1) 0014048.3 2) 0018246.9  
3) 0024920.1

(32) Date : 1) 06/06/2000 2) 25/07/2000  
3) 11/10/2000

(33) Name of convention country : UNITED-KINGDOM

(66) Filed U/s. 5(2) : YES

(61) Patent of addition to application No.: NIL

(62) Filed on : N.A.

(63) Divisional to Application No.: NIL

(64) Filed on: N.A.

(71) Name of the Applicant:

PFIZER INC.

Address of the Applicant:

235 EAST 42<sup>ND</sup> STREET,  
NEW YORK, NY 10017

(72) Name of the Inventors:

1) MANTELL SIMON JOHN  
2) STEPHENSON PETER THOMAS

(57) Abstract : The present invention relates to compounds of formula (I) and pharmaceutically acceptable salts and solvates thereof, and to processes for the preparation of, intermediates used in the preparation of, compositions containing and the uses of, such compounds.

## ALTERATION OF DATE UNDER SECTION 16

193993 (145/MAS/1999) ANTE DATED TO 23-02-1994.

193994 (535/MAS/1999) ANTE DATED TO 15-02-1994.

193996 (1666/MAS/1998) ANTE DATED TO 24-02-1994.

## अभिगृहित पूर्ण विनिर्देश

एतद्वारा सूचना दी जाती है कि आवेदनों में किसी पर पेटेंट अनुदान का विरोध करने वाले इच्छुक व्यक्ति राजपत्र के इस निर्गमन की तिथि से चार महीने के भीतर या उक्त चार महीने की समाप्ति के पूर्व, प्ररूप 4 में यदि आवेदित किया हुआ हो, तो परवर्ती एक महीने के भीतर, किसी समय, नियंत्रक, पेटेंट को ऐसे विरोध की सूचना प्ररूप 7 में उपयुक्त कार्यालय में दे सकते हैं। विरोध का लिखित कथन साक्ष्य के साथ, यदि कोई हो, दो प्रतियों में उक्त सूचना के साथ या अगले दो महीने की अवधि के भीतर दाखिल किया जाए। इस संदर्भ में, यथा संशोधित पेटेंट अधिनियम, 1970 की धारा 25 एवं पेटेंट नियम, 2003 के नियम 55 से 57 का अवलोकन किया जा सकता है।

उपयुक्त कार्यालय द्वारा विनिर्देश एवं चित्र आरेख, यदि हो, के छायाप्रति की आपूर्ति छायाप्रति शुल्क के रूप में प्रति पृष्ठ रु. 4/- की अदायगी पर की जा सकती है।

## COMPLETE SPECIFICATION ACCEPTED

Notice is hereby given that any person interested in opposing the grant of a Patent on any of the Applications, may, at any time within four months from the date of this issue of Gazette or within further period of one month if applied for in Form 4 before the expiry of the said period of four months, give notice to the Controller of Patents at the Appropriate Office on Form 7 of such opposition. The Written Statement of Opposition accompanied by evidence, if any, should be filed in duplicate along with the said notice or within further period of two months. Section 25 of The Patents Act, 1970 as amended and Rules 55 to 57 of The Patents Rules, 2003 may be referred to in this regard.

Photo copies of the specification and drawings, if any, can be supplied by the Appropriate Office on payment of photocopying charges @ Rs. 4/- per page.

### **04 CLAIMS**

A method of producing a mass of diamond crystals, which are predominantly macroscopically faceted single crystals, including the steps of providing a source of diamond crystals and which are substantially free of macroscopically faceted surfaces, producing a reaction mass by bringing the source into contact with a suitable conventional solvent/catalyst, subjecting the reaction mass to conditions of elevated temperature and pressure suitable for crystal growth in the reaction zone of a high temperature/high pressure apparatus, removing the reaction mass from the reaction zone and recovering the crystals from the reaction mass, the conditions of crystal growth being chosen such that the source diamond crystals are converted to diamond crystals having developed macroscopic facets of low Miller index, the supersaturation driving force necessary for crystal growth being generated predominantly by the difference in surface free energy between low Miller index surfaces and the high Miller index surfaces of the source diamond crystals.

### 17 CLAIMS

1) A medical device for dispensing an injectable fluid from a carpule through a needle that is retractable following use, the device comprising:

a tubular housing having a front portion, an inner wall surface and an open back end;

a carpule insertable into housing through the open back end, the carpule having a cylindrical wall, a front opening containing a slidable front seal, a rear opening, and a two-part piston inserted through the rear opening into sealing and sliding engagement with the cylindrical wall to define a medicament chamber confining the injectable fluid between the front seal and the piston prior to injection;

a plunger slidably insertable into the housing and having separate outer and inner walls, said outer plunger wall being insertable into an annular space between the inner wall surface of the housing and the cylindrical wall of the carpule, and said inner plunger wall being slidably insertable into the carpule to move the piston seal forward as the plunger is depressed into the housing by a user during an injection;

a retraction mechanism mounted in the front portion of the housing, the retraction mechanism comprising a needle holder, needle portions extending forwardly and rearwardly from the needle holder, a biasing element applying a rearwardly directed retraction force to the needle holder, and a separable member gripping the needle holder and being restrained by the inner wall surface of the housing;

the front seal of the carpule being puncturable by the rearwardly extending needle portion, thereby establishing a flow path between the injectable fluid disposed inside the carpule and the forwardly extending needle portion as the plunger is depressed into the housing;

said front seal of the carpule being rearwardly displaceable into the carpule and said separable member being forwardly displaceable and disengageable from the needle holder upon full depression of the plunger into the housing following injection of the injectable fluid through the forwardly extending needle portion;

whereby, following disengagement of the separable member from the needle holder, the needle holder and the needle portions are forced upwardly into the housing due to the retraction force exerted on the needle holder by the biasing element

### 20 CLAIMS

1) A method for providing future upgradability and expandability of devices in a home audio video network, the method comprising the steps of:

a) generating a default control module for a first device coupled to the network by using a second device coupled to the network, wherein the default control module is configured to provide a predetermined minimum degree of interoperability between the first device and the second device;

b) accessing the first device via the default control module by using the second device, wherein the default control module enables the first device to respond to a default set of commands from the second device;

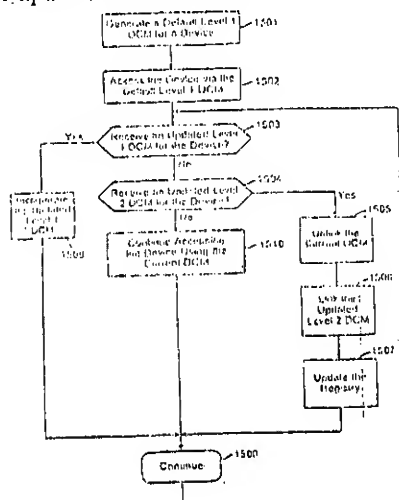

c) receiving an updated control module for the first device;

d) replacing the default control module with the updated control module by unlinking the default control module and linking the updated control module; and

e) accessing the first device via the updated control module wherein the updated control module enables the first device to respond to an updated set of commands, from the second device; wherein the first device can be controlled by commands originating from the devices of the home audio video network that are received by the updated control module.

### 7CLAIMS.

An apparatus for circulating a cool air in a refrigerator comprising :  
an evaporator (212) mounted at the rear of the refrigerator compartment(220) ;  
a blowing fan (213) for exhaling a cool air which is heat exchanged in the evaporator, into the inside of the refrigerator compartment ;  
rear and front covers (228, 229) for forming an exhaling passage which guides the cool air heat exchanged to be exhaled into the inside of the refrigerator compartment ;  
a cool air exhaling duct (240) mounted at the top of shelves in the refrigerator compartment;  
a plurality of air guides (241) for guiding the cool air from the exhaling passage to be dispersed at an upper portion of the front in the refrigerator compartment;  
a temperature sensor (225) mounted in the center of the refrigerator compartment, for sensing temperature of the refrigerator compartment ;  
a door sensor (226) mounted in a panel at the front of the refrigerator compartment; for sensing whether the door is open or close; and  
a controller linked to the temperature sensor and the door sensor, for operating the blowing fan depending on opening of the door of the refrigerator compartment,

characterized in that the said controller is adapted to switch on the blowing fan whenever the temperature in the refrigerator compartment exceeds a predetermined temperature as sensed by said temperature sensor or the door of the refrigerator compartment is opened as sensed by said door sensor, thereby forming and maintaining an air curtain by dispersing the cool air at an upper portion of the refrigerator compartment, and to prevent the cool air from leaking out outside when the refrigerator door is opened.

Device for fail safe controlling and monitoring electric loads in rail transport, in rail transport, characterized in that

- a) each load circuit has at least two series-connected switches (S0/1, S0/2, S1/1; H11/1, H21/1; H12/1, H22/1), which can be controlled independently, of one for opening/closing the circuit .
- b) the two switches can be controlled by independent computer channels of a reliable computer system,
- c) each wire of the circuit contains one of the two switches.
- d) At least one detector (FD; M1, M2) is provided for detecting a test voltage which is derived from a supply or test current flowing via the load (LG, LR; WA), or is connected at least indirectly by the load, and is dependent on the operating state of the load.
- e) A switch closed or opened at the wrong time changes the test voltage in a marked way as against the test voltage set up given a proper switch position.
- f) The detector output signals are evaluated by the two computer channels of the reliable computer system, and the computer system detects a wrongly times open\closed state of at least one of the switches from the occurrence of detector output signals not currently expected.

### 7CLAIMS.

A multi-stage combined optical isolating device for transmitting uni- directional light signals comprising:

a first collimator, such as herein described; for collimating a ray emitted from a first optical fiber;

an optical isolator having a first polarizer, such as herein described, for birefringently transmitting an incident ray into an ordinary ray and an extraordinary ray, a Faraday rotator for rotationally transmitting the incident ray, and a second polarizer, such as herein described, for inversely transmitting the incident ordinary ray and extraordinary ray, sequentially disposed on an optical path;

a second collimator, such as herein described, for focusing the light transmitted through the second polarizer, such as herein described, onto a second optical fiber;

a third collimator, such as herein described, facing the light receiving plane of the first polarizer, such as herein described, and disposed at a position different from that of the first collimator, such as herein described, for focusing a ray emitted from a third optical fiber; and

a fourth collimator, such as herein described, facing the light emitting plane of the first

polarizer, such as herein described, and disposed at a position different from that of the second collimator, such as herein described, for focusing a ray emitted from the third collimator, such as herein described, via the optical isolator onto a fourth optical fiber.

### 7CLAIMS.

1. A compound change gear transmission assembly (40), with reduced gear hopout, comprising:-

- an input shaft (42) disposed along a central axis (52);
- a floating mainshaft (30) disposed substantially along said central axis (52) adjacent said input shaft (42) and an auxiliary section (34) adjacent said mainshaft (30);
- at least one countershaft (18) parallel with and spaced from said central axis (52), said countershaft (18) being operative to transmit input shaft torque to the mainshaft (30) and to facilitate "power take off" (PTO) operation;
- a splitter gear (54) disposed on said input shaft (42) and having a central bore (56) formed therethrough with a minimal diametral clearance with respect to said input shaft (42) to minimize splitter gear tipping;
- a synchronizer (64) disposed about said input shaft (42) adjacent said splitter gear (54) and having a clutch spline (78);
- a pair of oppositely tapered roller bearing sets (60,62) disposed about said input shaft (42) adjacent said synchronizer (64);
- a headset gear (58) rotatably mounted on said pair of oppositely tapered roller bearing (60,62) sets for minimizing gear tipping during PTO operation; characterized in that

said synchronizer clutch spline (78) is selectively engageable with one of said splitter gear (54) and said headset gear (58); reducing the likelihood of gear hopout of said gear (54,58) with respect to the clutch spline (78) during PTO operation.

16CLAIMS.

An improved process of producing bright light fast  
dehaired and easily dyeable jute fabrics by bleaching which  
comprises -

- a) washing the fabrics with soap solution to remove  
the adhering dirt and then with cold water to remove  
the excess soap.
- b) treating the clean jute fabrics of step (a) with  
Potassium Permanganate and Sulphuric acid at least for  
half an hour under controlled condition to remove the  
preliminary yellowness to a certain extent and to  
modify the surface of the fibre by oxidation of surface  
lignin.
- c) washing with cold water till the wash liquor is  
non-acidic and then with oxalic acid solution to  
remove the last traces of  $Mn^{+2}$  ion from the fibre and  
then final washing with cold water before bleaching.
- d) bleaching with hydrogen peroxide in presence of  
metasilicate and sodium carbonate neutralised diethylene-  
triethyl-pentamethylene phosphonic acid (D.T.P.M.P.A)  
till the bleaching is completed.
- e) washing the bleached fabric with hot water and then  
with acidified water containing acetic acid.

## CLAIMS U/S 20(1) OF THE PATENTS ACT, 1970

In pursuance of leave granted under section 20(1) of the Patents Act, 1970, the application No. 805/MAS/95 dated 30/06/1995 filed by INTERNATIONAL BUSINESS MACHINES CORPORATION of New Orchard Road, Armonk, New York 10504, USA has been allowed to proceed in the name of HITACHI GLOBAL STORAGE TECHNOLOGIES NETHERLANDS B V, of Locatellikade 1, Parnassustoren 1076 A Z Amsterdam, The Netherlands.

## NOTIFICATION UNDER SECTION 60

Patent No. 184960 was ceased on 08-07-2003 due to no payment of renewal fee where as the patentee DONALD DOUGLAS HICKEY has made an application under section 60 of the Patent act 1970 for restoration of said patent.

Any interested person may give notice of opposition to the restoration by leaving a notice of Form-14 in duplicate, with the Controller of Patents. The Patent Office, Delhi Branch, W-5 West Patel Nagar, New Delhi-110 008 Under Rule 85 of the Patent (Amendment) Rules, 2003. A written statement, in triplicate, setting out the nature of the opposition interest, the facts upon which he bases his case and the relief he seeks, shall be filed with the notice or within two months from the date of advertisement of the notice in the official Gazette.
